Global Gateway

Global Gateway Green Shipping Corridors

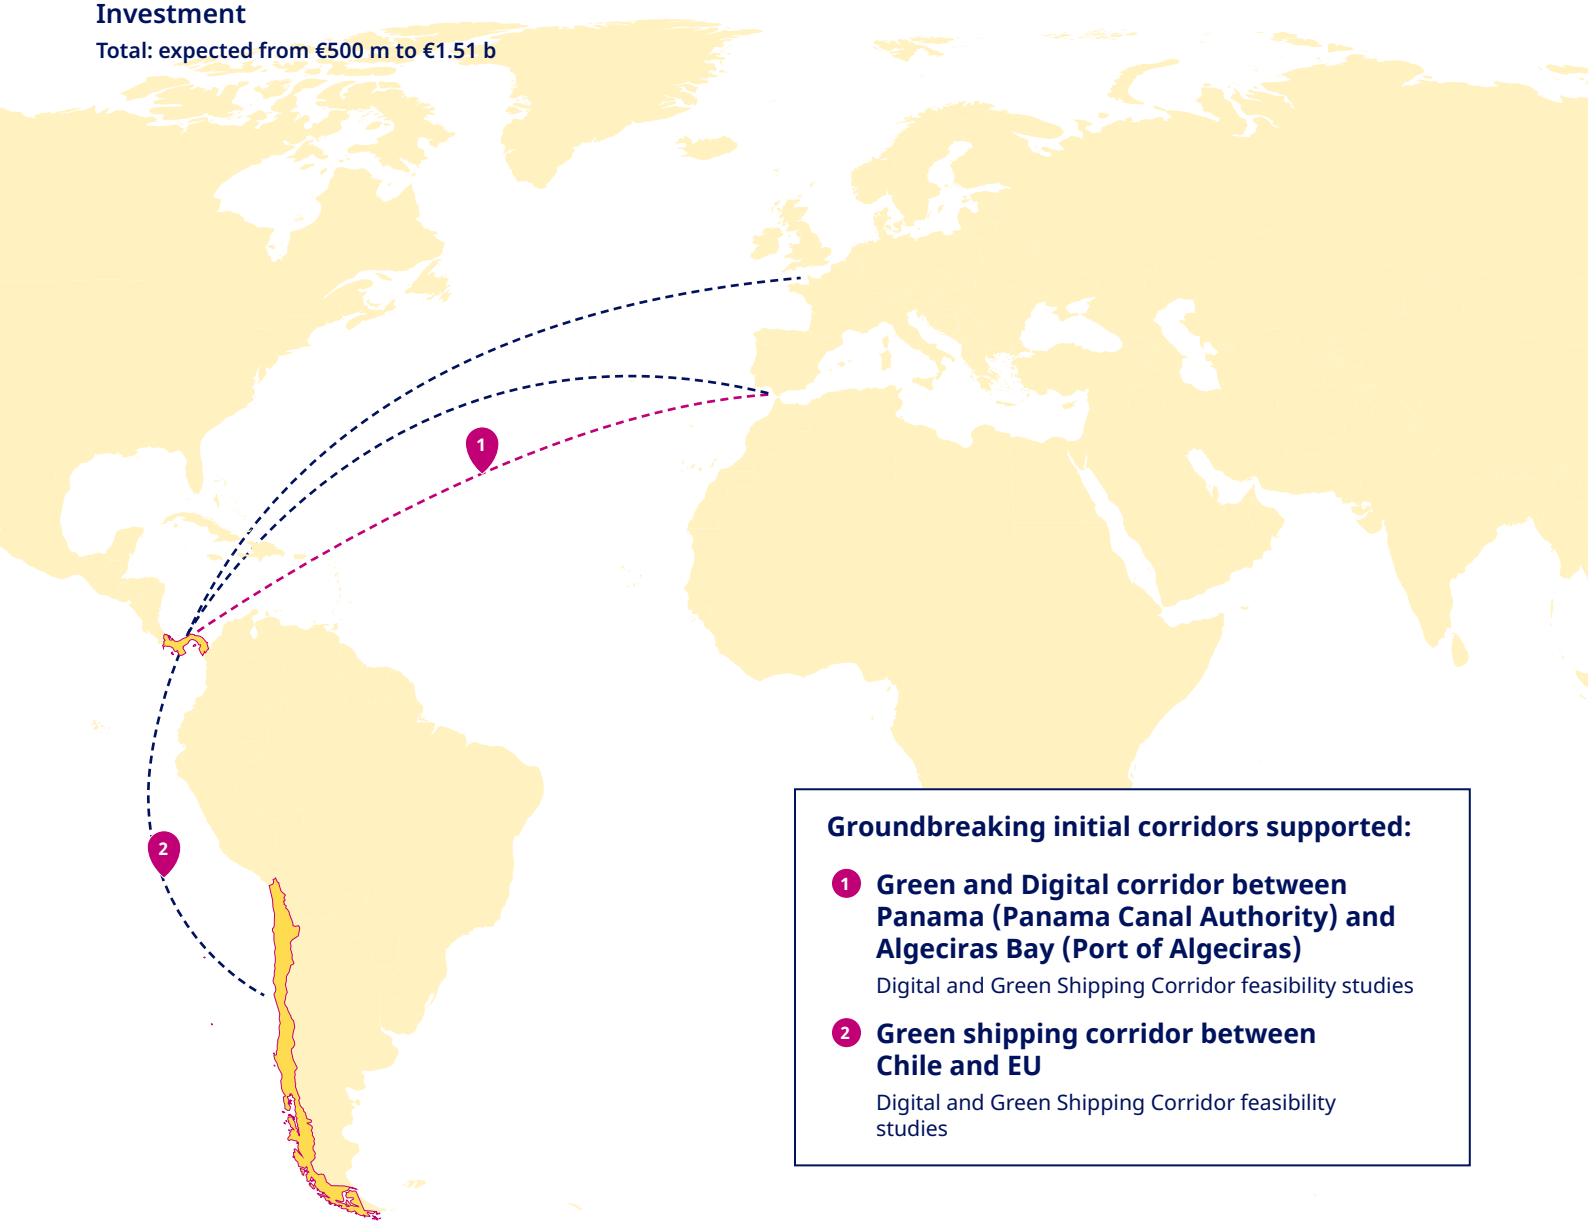
Green shipping corridors are a strategic EU global tool to drive maritime decarbonisation while ensuring competitiveness and equity. The sector faces major challenges: costly and unscalable green fuels, lack of infrastructure, fragmented regulations, and unequal access to technology. Decarbonisation also has geopolitical implications, risking new dependencies and widening global disparities.

Team Europe

Other Partners including IMO, World Bank

Investment

Total: expected from €500 m to €1.51 b



Groundbreaking initial corridors supported:

1. **Green and Digital corridor between Panama (Panama Canal Authority) and Algeciras Bay (Port of Algeciras)**
